

Green Button Toolset Solution

Green Button Toolset for
Utilities, LDCs, and Utility Vendors

OVERVIEW

The team of Utilismart, Screaming Power and UtilityAPI offers a best-in-class Green Button Connect toolset designed for the Canadian market. Built on UtilityAPI's mature, Green Button Alliance-certified, UL-tested Data Access Platform, our toolset offers standardized Green Button Connect My Data (GBCMD) and Green Button Download My Data (GBDMD) solutions that minimize utility costs and simplify an otherwise complex process. Our platform can be easily embedded into most existing utility Meter Data Management systems or utility vendor platforms. It complies with and exceeds NAESB ESPI 3.3, as required by the province of Ontario. Our proven platform is already available to millions of utility customers across Canada and the United States, allowing them to manage data sharing with the click of a button.

Enable 3rd parties

Regulatory requirements, market forces, and shifting customer expectations have fundamentally changed the utility environment. Now, utilities are being asked to provide solar calculators, build resilience against extreme weather patterns, contribute to reducing CO² emissions, and fight climate change.

An army of 3rd party companies want to help customers achieve their goals. They all need the same thing: access to customer utility data. Our platform lets utilities give their customers a secure way to easily share that data.

Delight commercial customers

Cater to your large commercial electricity customers who need automated access to their usage data for their extensive commercial management systems. Our platform allows them to access their data, without the need for utility staff involvement.

Boost internal programs

Utilities are very good at keeping data safe, sometimes even from themselves. Give your own internal programs a way to make large data requests and have them fulfilled without committing utility staff time.

PRICING STRUCTURE

- Volumetric pricing
- One-time integration fee

EASY 3-STEP APPROACH

- 1 3rd party registration/approval**
Distributed Energy Resources, Demand Response, Energy Efficiency, EV, and Energy Management companies
